SARTHAK MANGESH MANDHARE

Full-Stack Software Developer

Dombivli, Mumbai, Maharashtra, India | 9326397599 | sarthakmandhare34@gmail.com

LinkedIn | GitHub

SUMMARY

Frontend-leaning full-stack developer who builds AI-integrated web applications with React, TypeScript, and Node.js. Shipped two production-deployed projects — a healthcare prototype on Render and an MBTI assessment platform on Vercel — and completed two AI-focused virtual internships building diagnostic and climate-safety tools with the Gemini API.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, SQL
Frontend	React.js, HTML5, CSS3, Responsive Design, UI/UX
Backend	Node.js, Express.js, REST APIs
Databases & ORM	MySQL, MongoDB, Drizzle ORM
AI	Google Gemini API, Prompt Engineering, AI Integration, Google AI Studio
Testing	Unit Testing, Integration Testing, Test Mocking
Tools & Deployment	Git, GitHub, npm, Render
Authentication	OAuth 2.0, Session-based Authentication

VIRTUAL INTERNSHIP EXPERIENCE

IBM SkillsBuild June 2026 – July 2026

AI Automation & Intelligent Solutions Virtual Internship

Project: LuminaHub — Educational Diagnostic Pre-Grader

- Built a platform that reviews student submissions, flags conceptual misunderstandings, and generates follow-up practice questions, using React, TypeScript, Node.js, Express, and the Gemini API.
- Implemented diagnostic grading, concept-mastery analysis, and adaptive hints so feedback changes based on where a student is stuck, rather than showing the same response to everyone.
- Built a teacher-facing analytics view so instructors can see which concepts a class is struggling with, not just individual scores.
- Tested the integrated AI features in Google AI Studio before merging them into the main UI.

Lenovo LEAP June 2026 – July 2026

Generative AI & Agentic Systems Engineering Virtual Internship

Project: HeatSafe AI — Climate Heatwave Safety & Preparedness Platform

- Built the React and TypeScript frontend (via Vite) for an extreme-heat safety app, covering heat-risk assessment, hydration planning, symptom checking, and emergency guidance.
- Wrote prompts for the Gemini API to power the symptom-checking and safety-guidance features, then tested and adjusted them against edge cases such as conflicting symptoms and missing inputs.
- Integrated the AI-assisted components into the existing interface and fixed issues found during testing.

ACADEMIC PROJECTS

LifeLink — Smart Healthcare Assistance Platform

Major Academic Project · Prototype

React, TypeScript, Node.js, Express, MySQL, Drizzle ORM, Gemini AI, tRPC, SSE, Render

GitHub | Live Demo

- Built a healthcare prototype with symptom checking, doctor search, appointment booking, digital prescriptions, and an Emergency Health Passport, working mainly on the React/TypeScript frontend and wiring it to the backend and AI layer.
- Used Gemini Flash for symptom-based guidance, with built-in emergency checks, age-based rules, and a fallback response when the AI call fails.
- Built doctor search and appointment booking across 52 simulated doctors spanning 19 Mumbai railway stations.
- Modeled and managed application data in MySQL using Drizzle ORM.
- Deployed the prototype to Render, including the production environment and database connection setup.
- Wrote 247 tests across 33 files (1 skipped), covering unit and integration behavior.

KnowThySelf — MBTI Personality Assessment & Recommendation Platform

Group Project · Frontend Contribution

HTML5, CSS3, JavaScript, Node.js, Express, MongoDB

Frontend Repo | Backend Repo | Live Demo

- Built all five frontend pages (home, login, test, dashboard, recommendations) for a personality assessment platform.
- Built the questionnaire flow: slide-based cards, transitions between questions, and trait scoring with percentage calculations.
- Built the results dashboard, including visual trait bars and written personality insights.
- Designed the interface with glassmorphism and bento-grid layouts, responsive across screen sizes, with dark/light mode and an interactive HTML5 Canvas particle background.
- Connected the frontend to the backend for personality results and recommendations.

EDUCATION

Bachelor of Science in Computer Science — Expected Graduation: 2027

Keraleeya Samajam's Model College (Autonomous) — Current CGPA: 7.08/10

CERTIFICATIONS & TRAINING

- AI Automation & Intelligent Solutions — IBM SkillsBuild, AICTE (June–July 2026)
- Generative AI & Agentic Systems Engineering — Lenovo LEAP NextGen Scholar Program, AICTE (June–July 2026)
